## **Isotech Inc / KCCoyote High Speed Wireless Charter Member Program**

Isotech Inc has designed a charter member program to promote a more rapid deployment of high speed wireless services within a specific community.

Thirty Five (35) members will be the charter members and will be given certain member privileges upon the successful implementation of the KCCoyote high speed wireless network within their area.

Each member will pay for 1 year of service and the installation fee in advance. Installation of the service will be performed in the sequence of sign up and payment. This fee is in the amount of \$800 - \$1100 depending upon the distance from the access point and the equipment needed.

No payments will be taken until the minimum commitment of 35 members is received and the communications tower permits have been issued.

The process involves community meetings with interested residents and businesses to explain the nature of deploying a high speed wireless network as well as determine the level of interest.

Upon significant interest, Isotech will begin the process in choosing the site to place the high speed wireless access point. This will be an existing structure of at least 70' or a location for a free standing tower from 70' to 100' tall. Site locations will be selected based on the number of potential customers that can be reached from the high speed wireless access point.

Appropriate permits will be applied for and a public hearing if necessary will be held by the authoritative city or county offices.

Once the permit has been approved, Charter Member applicants will be qualified based distance and signal availability from the new high speed wireless access point location.

When the first Thirty Five (35) applicants are qualified we will ask for the membership funds and will begin the construction of the project. Typically the service will be available within 60 days and all of the charter members will have their service installed by 90 days from the beginning of the construction phase. Installation start time will be shortened to 30 days if the structure already exists and the public hearing is unnecessary.

Services that will be provided are primarily high speed internet. The service differs from other forms of broadband in that it is synchronous services that typically provides the same download and upload speeds. This service is qualified for Voice over IP, VPN, and video/surveillance applications.

The attached form indicates your interest in becoming a charter member and will be held in confidence until such time as the project passes the preliminary points and is ready to be funded.

Please fill it out and return it to us as soon as possible and you will be assigned a number to prioritize the installation schedule.

Name: \_\_\_\_\_  
Address: \_\_\_\_\_

Phone: Home \_\_\_\_\_ Work \_\_\_\_\_ Cell \_\_\_\_\_

Email: \_\_\_\_\_

I am interested in becoming a charter member for the local Isotech Inc / KCCoyote High Speed Wireless Project in my community.

I am willing and capable of paying for one year residential service at \$49.95 per month and a set up fee of \$200 - \$500 in advance to fund this project. The estimated initial payment would be \$800-\$1100.

I understand that Isotech Inc will install roof top wireless equipment, extend the network cable to an inside outlet, and provide broadband wireless service to the address above.

I understand that this service will be complete within 90 days from the beginning of the construction for a new access point tower site or 60 days from the deployment of the access point on an existing site.

Should the project funding not reach the level required to start the deployment, Isotech will consider the project as a standard deployment and will complete the project as funds from internal sources and no charter member program will be in place.
